Peter

This is not easy

First do not use MPLAB IDE but MPASMWIN  
This puts up a window and on the left hand side under RADIX is case sensitive, untick  
the files you have dont seem to assemble in MPLAB but I think if you load a file then  
the option becomes visible.

But warning MPLAB wont assemble these files, I did nor find out but MPASMWIN does with  
out problem select the file "gb3lg.asm". This calls all the others

Hope this helps

Martin
